

LipoDissolve Results

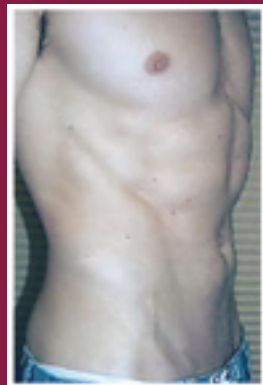

LipoSculpt™ body contouring and targeted fat reduction of abdomen, hips & inner thighs

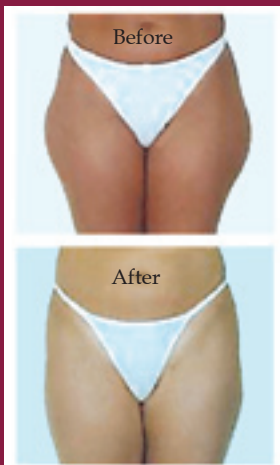

Results after 10 treatments
weight loss of 18 lbs,
9" circumference loss

Abdominal Contouring

Abdominal Contouring after
four treatments

LipoDissolve of saddle bags

Cellulite Reduction

About Steven C. Mills, M.D.

Dr. Mills received his Bachelors of Science degree at the University of California, San Diego. He attended the University of Rochester's Internal Medicine residency program completing the one year program. Dr. Mills then completed a three year residency program in Family Practice located at Wheeling Medical Park Hospital.

Dr. Mills' training has included studying in Waterford, Ireland for one year as well as many other medical rotations in California. He also had the opportunity to experience third world medicine in Montserrat.

Dr. Mills currently has received extensive training in the injection techniques of Botulinum Toxin Type A (Botox) as well as Juvederm and Radiesse facial fillers lead by Allergan. He has received certificate training in Meso Therapeutics and LipoDissolve-non-surgical Lipoplasty. His training was under the leadership of plastic surgeon, A.P. Salas, MD, FACS, FACM, who is affiliated with the Institute for Aesthetic Plastic Surgery and Mesotherapy. He also trained under Dr. Barry Lycka, who is one of North America's top cosmetic surgeons, and has been voted the years best top make-over doctor. Dr. Mills is a member of the ASAL- American Society of Aesthetic LipoDissolve and the ASNA- American Society of Non-Surgical Aesthetics.

Dr. Mills has been a resident of Wheeling, WV for twelve years and is currently practicing Aesthetic and Family medicine at Ohio Valley Medical Center.

Our Surgery-Free Procedures Include:

- Botox® - Facial Contouring
- LiquidLift - Facelift
- Dermal Facial Fillers
- Eyebrow Lifts
- Nasal Contouring - Nose Job
- Lip/Chin Augmentation
- Cheek Implants
- LipoDissolve
- Excess Fat Removal
- Cellulite Removal
- Sclerotherapy - Spider Vein Removal

What is LipoDissolve?

Lipodissolve is the new and gentle way to dissolve unwanted fat deposits, especially those not affected by diet or exercise. It is administered via tiny, micro-injections directly into the mesoderm. It is now acclaimed as the only effective treatment to refine and eliminate cellulite with long term results. Although LipoDissolve promotes weight loss, it is not to be used or considered as a weight loss tool. LipoDissolve treatments are the most cost effective non-surgical fat reducing treatment currently available. Most patients can begin treatment for as little as \$45 per month.

How Does LipoDissolve Work?

LipoDissolve formulas are composed of FDA-approved pharmaceutical medications, vitamins, and minerals. After consultation, examination, and discussion of your desired treatment areas, the physician prepares a personalized treatment plan. To dissolve fat, a series of micro-injections are delivered into the target areas. The medications induce lipolysis or "fat melting" in the body's adipose cells. Lipolysis metabolizes with collagen rejuvenation and repair, resulting in a smooth and firmer appearance.

The treatment procedure takes 40 minutes ranking it high on the lunchtime procedure list. Depending on the amount of unwanted fat and cellulite removed, 2 to 4 treatments are generally recommended. Treatments are most effective if done every 4 weeks, or as your schedule permits. *Both men and women benefit from LipoDissolve.* It is proven to reduce areas of fat and cellulite that do not typically respond to diet and exercise. LipoDissolve has a variety of uses such as for cellulite reduction and body sculpting of the chin and neck, upper arms, thighs, saddlebags, and buttocks; the abdomen, love handles, bra lines as well as skin rejuvenation of the neck, face, and after pregnancy. The injected LipoDissolve solutions depend on your specific treatment area. Unlike other aesthetic and medical treatments, LipoDissolve is administered directly to the targeted area for substantial desirable results.

Cellulite Reduction & Elimination

LipoDissolve permanently refines cellulite and eliminates dimpling or the cottage cheese connective tissues. Interestingly, the unmasking of

cellulite with prominence of fat asymmetry has become the most common complications of liposuction over the past fifteen years. LipoDissolve effectively treats three factors involved in cellulite formation: the specific formula injected reduces the fat in your cellulite, improves impaired circulation and breaks down and rejuvenates damaged connective tissue – thereby smoothing the skin surface.

Once treated, the skin will appear significantly smoother and refined. Mesolift, or contouring of the buttocks, is also performed in the course of cellulite treatment. LipoDissolve is the definitive aesthetic treatment for cellulite.

Liposuction vs. LipoDissolve

- | | |
|--|---|
| • Surgical Procedure | • Non-Surgical Procedure |
| • Cannot be used where there is cellulite | • Used wherever there is cellulite |
| • Down time (2 weeks) | • No down time |
| • Wear restrictive garments afterwards for weeks | • Wear loose clothing after treatments (for 48 hrs) |
| • Significant bruising & pain | • Minimal bruising & pain |
| • Lost wages during recovery | • No lost wages |

Face & Neck Rejuvenation

The Mesolift is a popular alternative to invasive cosmetic procedures, effectively treating the effects of aging and sun exposure, sagging and wrinkling of the skin. The Mesolift process delivers vitamins, amino acids, retinoic acid, glycolic acid, and lipoic acid directly into the epidermis, mesoderm, and fascia to nourish and rejuvenate, promote production of collagen and elastin, and stimulates your natural metabolism. Necksculpting eliminates fat under the neck, double chins, softens wrinkles, restores the jawline prominence, and tightens loose skin. After treatment, patients commonly describe their skin as looking

rested, radiant, glowing, firmer and younger.

LipoDissolve is also a highly effective rejuvenation treatment. The procedure can be used to tone and tighten sagging skin on the neck, legs, abdomen, and arms. This particularly addresses rejuvenation after weight loss, liposuction or pregnancy. Results are measured in centimeters and inches and results will vary from patient to patient.

How long do the results last?

LipoDissolve will dissolve fat permanently in the area treated, leaving only a thin layer of cells. If a person gains weight, the fat cells located in the non-treated areas will get larger. The treated area, however, will remain unchanged. Because LipoDissolve is essentially an investment in your body, it's important to maintain a healthy lifestyle by making good food choices and exercising to avoid weight gain.

The Advantages of LipoDissolve over Liposuction

LipoDissolve offers a safer, less invasive alternative without the risks or downtime involved with Liposuction. Liposuction does not treat cellulite and in fact, often results in making the cellulite more prominent and asymmetrical. LipoDissolve treats cellulite directly and the result is a smoother, refined skin surface. Uniquely, LipoDissolve is a non-surgical procedure that does not require hospital admittance, general anesthesia or downtime resulting in lost wages.

Is LipoDissolve Safe?

LipoDissolve is a safe technique using FDA approved medications. The most common side effects from LipoDissolve treatment is minimum bruising, redness, and inflammation from the injection sites.

Who Cannot Have LipoDissolve?

Patients who are pregnant, have insulin-dependent diabetes, history of recent cancer, heart disease or stroke, organ transplant recipients, or HIV positive patients are NOT eligible for LipoDissolve treatment. Dr. Mills and his staff will be happy to discuss your medical problems and medications in more detail during your free consultation.
